DETAILED ACTION

This is the first Office Action for application number 10/616,419, Flexible Roller

Arrangement, filed on 7/9/03. Claims 1-18 are pending.

Election/Restrictions

This application contains claims directed to the following patentably distinct

species of the claimed invention:

Species I: Fig. 1-3A,

Species II: Fig. 4A,

Species III: Fig. 4B

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for

prosecution on the merits to which the claims shall be restricted if no generic claim is

finally held to be allowable. Currently, No claim is generic.

Applicant is advised that a reply to this requirement must include an identification

of the species that is elected consonant with this requirement, and a listing of all claims

readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless

accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration

of claims to additional species which are written in dependent form or otherwise include

Application/Control Number: 10/616,419

Art Unit: 3632

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Donald Halgren on 8/17/03 a provisional election was made without traverse to prosecute the invention of Species I, Figs. 1, 2, 4 and 9, claims 1-6. Affirmation of this election must be made by applicant in replying to this Office action. Claims 7-18 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/616,419

Art Unit: 3632

Claims 1-6, line 7 recites the limitation "said support". There is insufficient antecedent basis for this limitation in the claim.

Claim 6 does not further limit claims 1-3 in that claim 2 has already recited that the roller links are "generally cylindrical in shape".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 5711430 to Dudley.

The patent to Dudley discloses an elongated extrusion having and uppermost wall (17), at least one tapered sidewall (16), the sidewall angularly extending from the uppermost wall, a support wall (15), arranged adjacent to the tapered sidewall and the support, a plurality of flexibly connected gripping members loosely within the longitudinal chamber, the gripping members being a plurality of generally cylindrical roller resilient links (25) having a common diameter connected longitudinally by a flexible connecting line (26a). (See Col. 3, line 67 for material selection).

Claims 1, 2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 3675782 to Dudley.

Art Unit: 3632

The patent to Dudley discloses an elongated extrusion having and uppermost wall (10), at least one tapered sidewall (12), the sidewall angularly extending from the uppermost wall, a support wall (11), arranged adjacent to the tapered sidewall and the support, a plurality of flexibly connected gripping members loosely within the longitudinal chamber, the gripping members being a plurality of generally cylindrical roller resilient links (30) being spaced no greater than their diameter and are connected longitudinally by a flexible connecting line (30a).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following documents show various poster supports
